

For your OpenVPN lab, based on the IPs you've shared:

```
OpenVPN Server
NAT      : 192.168.1.132
Host-Only : 10.0.1.128

LAN PC
Host-Only : 10.0.1.129

VPN Client
NAT      : DHCP (automatic)
```

OpenVPN Server Network Setup

Check Interfaces

```
ip a
```

Example:

```
ens160 = NAT
ens192 = Host-Only
```

Configure Host-Only Interface

```
sudo nmcli con mod ens192 ipv4.addresses 10.0.1.128/24
sudo nmcli con mod ens192 ipv4.method manual
sudo nmcli con up ens192
```

Verify

```
ip a
```

Expected:

10.0.1.128/24

LAN PC Network Setup

Configure static IP:

```
sudo nmcli con mod ens160 ipv4.addresses 10.0.1.129/24
sudo nmcli con mod ens160 ipv4.gateway 10.0.1.128
sudo nmcli con mod ens160 ipv4.method manual
sudo nmcli con up ens160
```

Verify:

```
ip a
ip route
```

Expected:

```
default via 10.0.1.128
```
